## PROFESSIONAL SUMMARY

Highly analytical Computer Science student with a strict focus on network security, log forensics, and secure web environments. Transmutes multi-disciplinary mathematical frameworks, Olympiad-level logic, and algorithmic thinking into proactive threat mitigation, vulnerabilities auditing, and architectural code hardening.

## PRACTICAL ENGINEERING & SECURITY PROJECTS

### Full-Stack Security & Web Deployment

#### Auntie's Portal & Active Church Platform Production

Engineered and securely deployed a production portal ([asantewaas-tour-645d.vercel.app](#)) and church asset tools. Instituted rigorous backend access rules, input validation frameworks, and safe configurations to fully protect against OWASP Top 10 vulnerabilities.

### SIEM Monitoring & Network Analysis Pipeline

#### Vulnerability Assessment Lab & Traffic Triaging

Orchestrated a virtualized Kali Linux sandbox environment to evaluate threat dynamics. Inspected and triaged packet captures using **Wireshark** and **tcpdump**. Built custom **Suricata** alerts and piped logging files into a unified **Wazuh** SIEM system for deep visibility.

### Automated Auditing & Scripting Engine

#### Log Analysis & Forensic Automation Tools

Programmed active **Python** automations to parse heavy system logs and isolate network anomalies. Structured operational **SQL** database queries to monitor permission drifts and discover misconfigured access controls.

## EDUCATION

### University of Ghana, Legon

#### Bachelor of Science in Computer Science

EXPECTED GRADUATION: 2029

**Key Areas:** Algorithmic Logic, Linear Algebra & Vector Geometry, System Forensics.

### Presbyterian Boys' Senior High School

#### High School Diploma — General Science (Biology Focus)

FEB 2023 – SEP 2025

**Societies:** Kangaroo Math Ghana, Pan-African Math Olympiad (PAMO) Squad, International STEM & Science Olympiad Teams.

*\* Gold Medalist: Mathleticus (2025). Transmuted systemic biology structures and high-tier competitive logic cleanly into cybersecurity architectures.*

## TECHNICAL PROFICIENCY

**SIEM & Threat Operations:** Wazuh SIEM, Incident Detection, Triage Workflows, Active Log Analysis.

**Network Traffic:** Suricata Rules, Wireshark, tcpdump Packet Inspection, Protocol Forensics.

**Systems & Databases:** Linux Admin, Command Line Forensics, SQL Query & Auditing.

**Programming/Web:** Python Scripting, Web Development, Cloud Input Validation.

## CERTIFICATIONS

### Google Cybersecurity Professional Certificate

Coursera / One Million Coders (May 2026)

Validates complete mastery of incident frameworks, network controls, packet streams, automated scripting tools, and forensic logic.

## CORE COMPETENCIES

### Systemic Pattern Recognition

Applies scientific systems background to quickly spot hidden data anomalies and isolate operational log variants.

### Rigorous Logic Execution

Brings abstract competitive math frameworks and award-winning logical problem solving straight to live threat architectures.

### Forensic Communication

Bridges low-level technical indicators (PCAPs, event strings) into actionable defensive risk matrices for business heads.
